

3.6m | 12ft ValuLine® High Performance, High XPD Antenna, dual-polarized, 4.400 – 5.000 GHz

Product Classification

Product Type Microwave antenna

General Specifications

Antenna Type HX - ValuLine® High Performance, High XPD Antenna, dual-polarized

Polarization Dual

Side Struts, Included 2

Side Struts, Optional 3

Dimensions

Diameter, nominal 3.6 m | 12 ft

Electrical Specifications

Operating Frequency Band 4.400 – 5.000 GHz

Gain, Low Band 41.6 dBi

Gain, Mid Band 42.2 dBi

Gain, Top Band 42.7 dBi

Boresite Cross Polarization Discrimination (XPD) 33 dB

Front-to-Back Ratio 68 dB

Beamwidth, Horizontal 1.2 °

Beamwidth, Vertical 1.2 °

Return Loss 23 dB

VSWR 1.15

Radiation Pattern Envelope Reference (RPE) 7428

Electrical Compliance ETSI 302 217 Class 3

Cross Polarization Discrimination (XPD) Electrical Compliance

ETSI EN 302217 XPD Category 2

Mechanical Specifications

Compatible Mounting Pipe Diameter

115 mm | 4.5 in

Fine Azimuth Adjustment Range

±5°

Fine Elevation Adjustment Range

±5°

Wind Speed, operational

180 km/h | 111.847 mph

Wind Speed, survival

200 km/h | 124.274 mph

Antenna Dimensions and Mounting Information

HX / USX12

Dimensions in inches (mm)						
Antenna size, ft (m)	A	B	C	D	E	F
12 (3.6)	8.5 (216)	28.2 (715)	149.3 (3793)	46.3 (1177)	81.5 (2069)	10.6 (269)

Wind Forces at Wind Velocity Survival Rating

Axial Force (FA)	26750 N 6,013.641 lbf
Angle a for MT Max	-120 °
Side Force (FS)	9450 N 2,124.445 lbf
Twisting Moment (MT)	-17550 N-m -155,330.594 in lb
Force on Inboard Strut Side	13000 N 2,922.517 lbf
Force on Outboard Strut Side	4500 N 1,011.64 lbf
Zcg without Ice	680 mm 26.772 in
Zcg with 1/2 in (12 mm) Radial Ice	841 mm 33.11 in

HX12-4

Operating Frequency Band

Bands correspond with CCIR recommendations or common

Gain, Mid Band	allocations used throughout the world. Other ranges can be accommodated on special order.
Boresite Cross Polarization Discrimination (XPD)	For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.
Front-to-Back Ratio	The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.
Return Loss	Denotes highest radiation relative to the main beam, at $180^\circ \pm 40^\circ$, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.
VSWR	The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.
Radiation Pattern Envelope Reference (RPE)	Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.
Cross Polarization Discrimination (XPD) Electrical Compliance	Radiation patterns define an antenna's ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of $\pm 1^\circ$ throughout
Wind Speed, operational	The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.
Wind Speed, survival	For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.
Axial Force (FA)	The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.
Side Force (FS)	Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
	Maximum side force exerted on the mounting pipe as a

result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Twisting Moment (MT)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
